Environmental Improvement of Coastal Villages in Sabah and Sarawak

AJSB was commissioned by Kementerian Pembangunan Luar Bandar to lead a team of consultants to carry out the necessary consultative works for 5 coastal villages namely Kg Mengkabong in Sabah, Kg Semilang, Kg Beradek, Kg Tanjung Bako and Kg Sungai Ud in Sarawak. AJSB also carried out the design and supervision works for the drainage, reinforced concrete pedestrian bridge, sanitation and solid waste management. The whole project is located in areas with unfavourable soil conditions, with some piling activities and other measures of soil treatment being involved. The completion of this project would give better access to the residents as well as upgrading the environmental quality in these areas.
