Arup Jururunding Sdn Bhd

Turnkey Contractor

Wayss & Freytag (M) Sdn Bhd

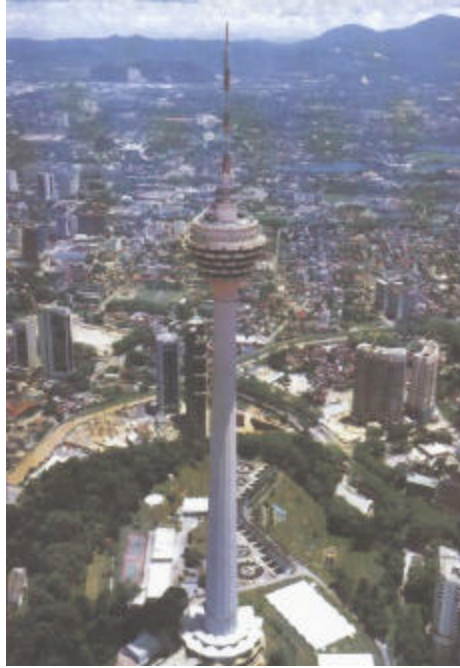

Project Cost

Approximately RM 250,000,000.00

Completion Date

1996

Menara Kuala Lumpur

The 421m high telecommunications tower is located on Bukit Nanas in the heart of Kuala Lumpur. When completed in 1996, the concrete structure will be one of the tallest telecommunications towers in the world.

A striking feature of the structure is the complex glazed facade for the Tower Head. It will house an observation gallery, a revolving restaurant and three levels of telecommunications, broadcasting and television transmission equipment. In addition, there will be touristic facilities at the ground level, including a theatre, handicraft shops and a restaurant.

Arup's responsibilities for the project include advising the Client on contractual matters, agreeing design parameters and specifications with the Contractor, carrying out independent design checks and advising on construction costs. During the construction stage, Arup was also commissioned to supervise the construction works and to monitor compliance with the specifications.
