## Pan Pacific Hotel Kuala Lumpur

An international hotel of 600 rooms with all necessary facilities for restaurants, a coffee-house, entertainment and recreational facilities and banquets. The hotel is part of the Putra World Trade Centre Complex and Exhibition Hall.

The tower structure consists of 5-storeys of conventional cast-in-situ concrete structures surmounted by a transfer deck supporting 25-storeys of precast concrete walls and slabs. This building is founded on large diameter bored piles and deep barrette piles to overcome cavernous limestone ground conditions.
